PRESS RELEASE

The Omega Group Supports The BCIT in Canada

This year, The Omega Group was proud to participate in the British Columbia Institute of Technology's Advanced GIS Diploma Program by sponsoring a GIS project. The BCIT is one of Canada's premier educational institutes. The Omega Group provided the initial idea for the project which was then designed and implemented by Cheng Zhong; a member of the class of 2006. Cheng's interest in the field of crime

analysis, and background as a GIS programmer/analyst with ESRI in China made him an ideal candidate for this particular project.

Cheng's project focused on creating a set of tools to spatially track stolen and recovered vehicles for crime analysis purposes. Tools were created in both the ArcGIS Desktop and ArcGIS Server environments using a combination of VB.NET and ArcObjects. The results of this project proved extremely successful, and provided our first foray into ArcGIS Server development.

Congratulations Cheng on a successful year at BCIT, and for the great work accomplished on this project!

*Special thanks to the New Haven Police Department for providing the sample data.
