PRESS RELEASE

City of Cleveland Implements CrimeView®

The City of Cleveland's Enterprise GIS group has deployed CrimeView® from the Omega Group to the Police Division of the Department of Public Safety. This easy-to-use crime analysis software integrates our RMS (records management system) data with GIS (geographic information system) data. By combining crime and spatial data, the City's crime analysts will enhance already valuable information in their efforts to focus on community oriented policing. CrimeView® enables effective mapping and analysis of current crime data, performs trend analysis, and provides meaningful, understandable reports. The analysis tools and the training provided to crime analysts for GIS and CrimeView® will help to further develop the crime analysis skills and experience levels of the Public Safety department as well as reduce the time required for analysis as compared to conventional techniques. This will allow for a rapid deployment of timely information to all public safety personnel.

The initial deployment will provide the Police Division's Crime Analysts, Cleveland's Citistat and Emergency Operations Center with crime analysis and GIS software. Software training is scheduled to be completed the week of October 24th, 2005.
