PRESS RELEASE – CrimeView®

East Orange Police Battle Crime with Timely Data

East Orange Police Department in New Jersey successfully reduced overall crime rates within the city over the last few years through the innovative use of technology. To further expand the approach, the department recently implemented CrimeView® to map out and report recent activity. A customized import process setup by The Omega Group automatically uploads information to CrimeView® from the dispatch and records management systems every ten minutes. When an analyst maps out crime, the data queried is always current. Having timely data allows the department to react more quickly to new events and trends.

East Orange Police Department also uses CrimeView® for weekly CompStat meetings to assign patrols based on incidents occurring within the last three weeks. The following week, the analysts and command staff compare the patrol effort, such as field interviews and traffic stops, to the incident locations to insure that the correct areas are being targeted. Using CrimeView®, East Orange Police Department improved efficiency tremendously and applied new techniques in conducting analyses and preparing materials for strategic deployment meetings. Putting officers in the right place at the right time will continue to help reduce crime in East Orange.
